THIS IS UNEVALUATED INFORMATION

SOURCE ~~SECRET~~ citizen, ~~SECRET~~ for one of the large ~~SECRET~~
manufacturing companies in the U.S. He is directing a rather extensive
research program for his company, including work on tranquilizing agents.
He has been a very cooperative source and has furnished much information
on psychogenic agents.

H 1. ~~SECRET~~ subject who has been in ~~SECRET~~ for three years),
B-6 ~~SECRET~~ has said that the drug most fre-
quently used in the Sovblos for interrogation and brainwashing is Mefrazol.
The hallucinatory and painful experience with this drug is said to be so
severe that after one shot the subject is amenable to anything in order
to forestall receiving another shot. Mefrazol is widely used to bring
on shock in the treatment of schizophrenia.

B-6 2. It has come to my attention that Frenquel*, when taken intravenously,
negates the hallucinatory experience induced by LUD-25 and adrenochrome.
This has been reported in the literature by ~~SECRET~~, although the drug
is still in the clinical stage and is not yet on the market.
